Aggregate attacker-learning curves invert the within-attacker truth
(a) pooled hazard FALLS
LLMail, one line per cell
success hazard (%)
attempt index
(b) same, Tensor Trust
18.1% → 0.3%
Claude
Gpt
Palm
success hazard (%)
attempt index
(c) within attacker, successes are LATE
→ hazard RISES
LLMail all cells
LLMail drop enders
LLMail truncated
TensorTrust all cells
TensorTrust drop enders
TensorTrust truncated
mean normalised success position − 0.5
